

Eurovac Service cabinet

The service cabinet is used, for example, for smaller hand tools and equipment for cleaning and servicing so that dust does not spread into the environment. It allows the worker to work without being exposed to dust that is harmful to breathing, while also preventing dust from spreading to other work areas. This is particularly important when handling tools and machines containing hazardous dust.

The service cabinet is equipped with its own dust extraction vacuum unit, HEPA 13-classified filters, a rotating service table that facilitates working, and a work light. Filter cleaning of the 1.1 kW unit is done manually by turning the compressed air tap.

Filter cleaning in the 2.2 kW unit is automatic. The cabinet also has connections for compressed air and for an external vacuum cleaner.

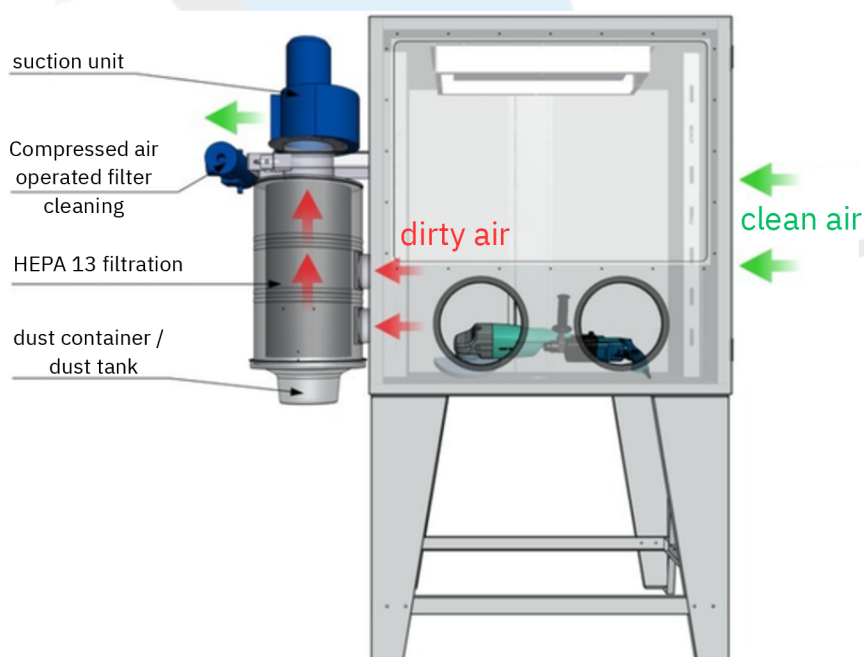

Power	Voltage	m ³ /h max.	dB	Pa max.	Kg
1,1 kw	220V /50Hz	2240	74	980	n. 300
2,2 kw	400V / 50Hz	2750	76	1240	n. 310

Dimensions

External (mm)			Working space (mm)		
H	W	D	H	W	D
2070	1160	830	1020	1000	700
232	5*				
1596*					

* With blower

In the more powerful 2.2 kW device, a compressed air tank for filter cleaning is included as standard. The picture also shows as special equipment a control center and a larger filter section.
