DOMESTIC QUALITY –
EFFICIENCY AND PURITY FOR
INDUSTRIAL NEEDS

SUOMEN IMURIKESKUS OY

Basic information

- **Established:** 1985
- **Revenue 2025:** 5.6 million €
- **Employees:** 26
- **Location:** Pomarkku
- **Production facilities:** 5000 m²

► Products and services

Main products:

- Eurovac systems and industrial vacuum cleaners

► Expertise and quality

- Own 3D design
- In-house production
- ATEX-trained personnel
- Special expertise in electrification and automation
- Certified quality management system ISO-9001:2015

OUR CORE VALUES

Our values guide everything we do and define how we create value for our customers and the community.

PEOPLE

1

People are the foundation of everything.

People are at the heart of all our operations – whether they are employees, customers, or other stakeholders.

INNOVATION

2

We invest in continuous development, creativity, and trying out new solutions – in products, services, and responsibility.

Even small everyday improvements lead to better and more sustainable operations.

COOPERATION AND TRUST

3

We believe that strong cooperation with stakeholders is the key to success.

We work closely with our customers throughout the entire lifecycle.

RESPONSIBILITY IN EVERYDAY ACTIONS

4

We take responsibility for the environment, people, and the lifecycle of our products – creating a sustainable foundation for the future.

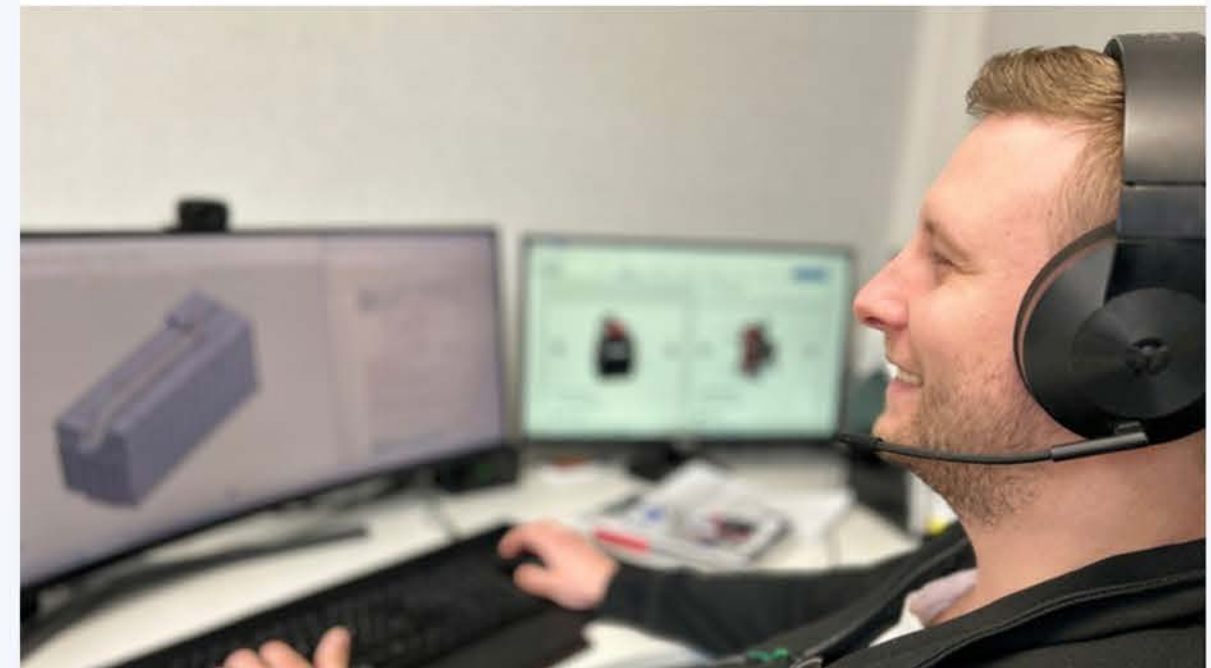

OUR VISION AND MISSION

OUR VISION

The vision of Suomen Imurikeskus Oy is to be the leading company in its field and the first choice for everyone who wants to work in a clean and safe working environment.

OUR MISSION

Our mission is to improve industrial working environments and occupational safety with high-quality solutions for cleanliness and air quality – with the goal of achieving high customer satisfaction.

HISTORY AND DEVELOPMENT PATH

SUOMEN IMURIKESKUS OY – 40 YEARS FOR A CLEANER INDUSTRY

Suomen Imurikeskus Oy is a family-owned company founded in 1985 in Pomarkku. In the early years, the focus was on importing portable industrial vacuum cleaners and manufacturing solutions for professional use. The company's development was quickly driven by understanding customer needs and in-house product development, thanks to which the Eurovac and Hurricane brands became well-known at an early stage.

In 1987, Kari Ekholm developed the first Hurricane industrial vacuum cleaner, designed especially for the efficient removal of fine dust.

This laid the foundation for domestic production and technological specialization.

The business expanded rapidly:

- Initially, a three-person team produced up to 1,000 vacuum cleaners per year.
- Sales were supported by a network of 26 resellers across Finland.
- In 1997, relocated to 4,000 m² facilities in Kankaanpää Yrityspuisto.
- In 2014, relocated to current 5,000 m² facilities in Pomarkku.
- Since the 2000s, the company has increasingly exported equipment internationally.

Founder Kari Ekholm in the production facilities of Suomen Imurikeskus Oy.

WHY CHOOSE THE EUROVAC SYSTEM?

Domestic Eurovac systems provide a reliable and efficient solution for industrial and educational facility cleanliness.

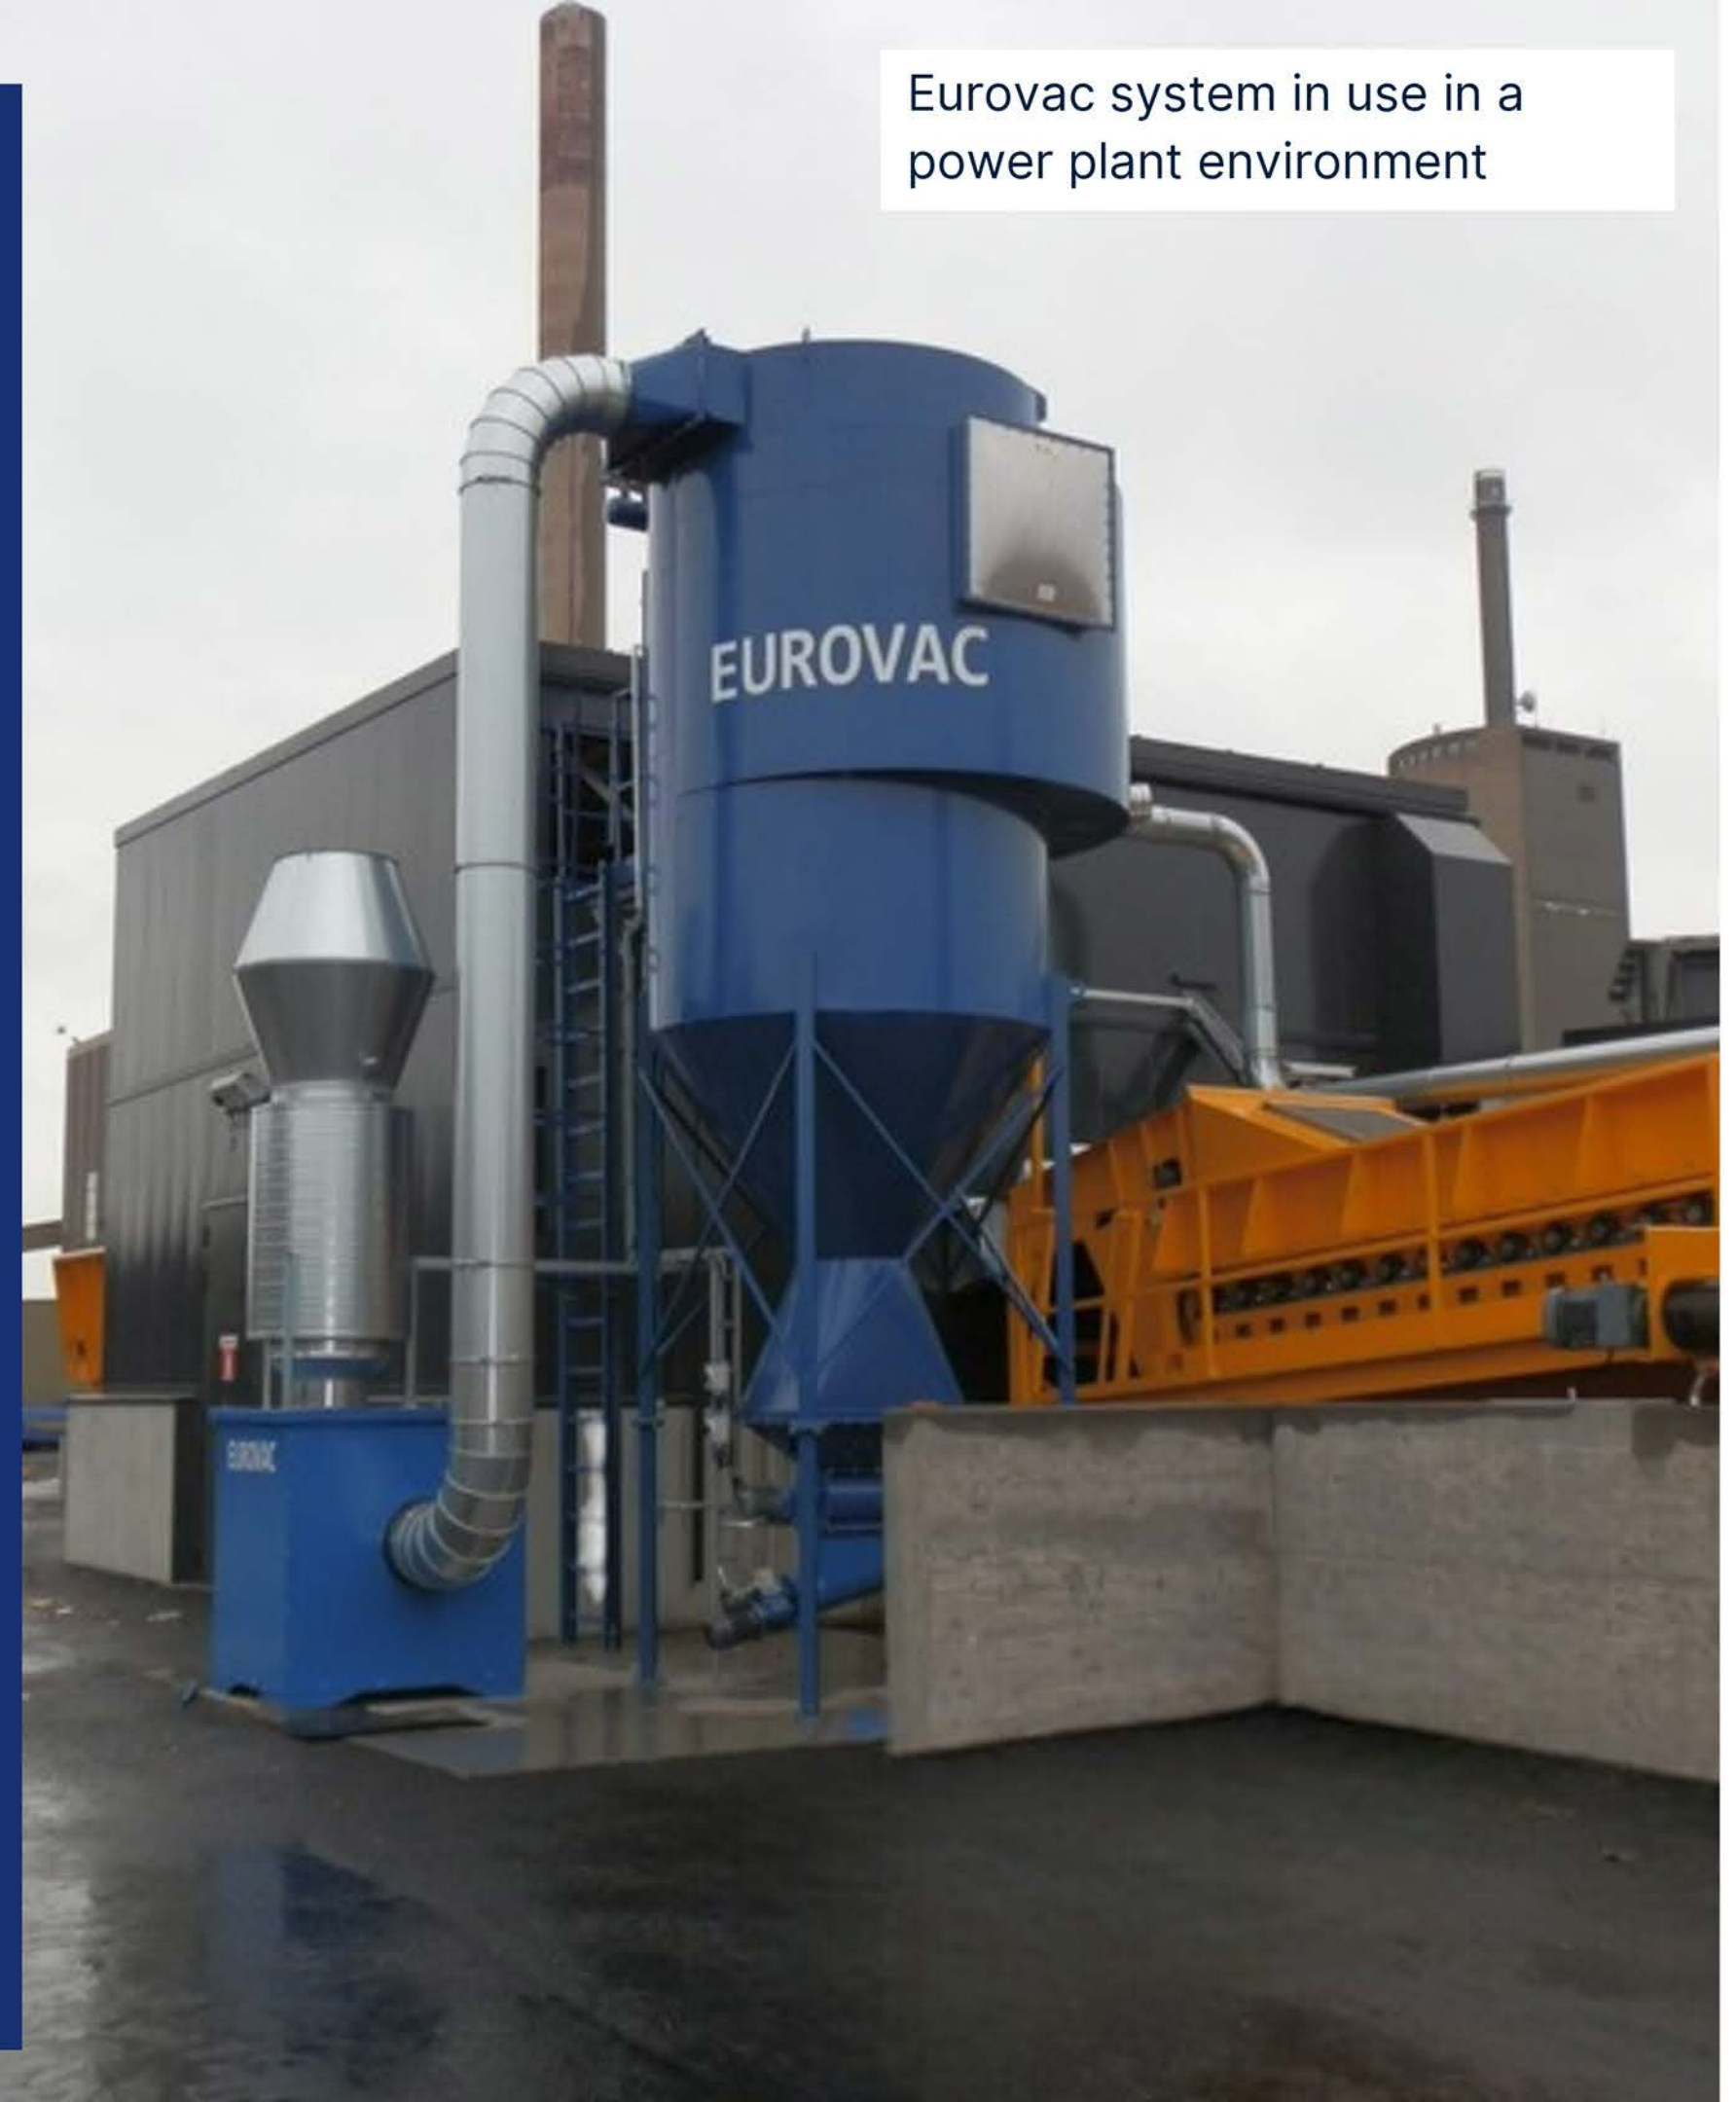

They are especially well-suited for handling challenging materials such as fine dust, chips, and process waste – both in production facilities and technical classrooms.

The Eurovac system brings significant benefits to our customers:

- Improved safety – the working environment stays clean and dust under control
- Increased efficiency – reduces the need for manual cleaning significantly
- Sustainable development – dust collection prevents material loss and improves workplace air quality

The systems are always tailored to customer needs – we take into account the special requirements of the environment, such as dust classifications and ATEX areas, ensuring a safe and functional overall solution.

Eurovac system in use in a power plant environment

EUROVAC SYSTEMS – A RELIABLE SOLUTION FOR DIFFERENT INDUSTRIES

Domestic manufacturing, flexible design, and long experience ensure that we provide the right solution for your production environment – cost-efficiently and safely.

Eurovac systems are designed to be flexible and efficient solutions for various industrial sectors.

With experience from more than 500 system deliveries, we understand the requirements of different industries – and supply systems for, among others, the following sectors:

- **Power plants**

service outages, daily cleaning and dust control in boilers, intake areas, screening stations and conveyors

- **Forest and sawmill industry**

chip and dust collection in sawmills and planing mills

- **Food industry**

hygienic fine dust control in production facilities.

- **Metal and mechanical engineering industry**

control of grinding dust and heavy materials.

- **Pharmaceutical and chemical industry**

high purity requirements and ATEX areas.

- **Construction and demolition sites**

mobile units and centralized solutions for dusty environments.

CLEAN ENVIRONMENT IN EDUCATIONAL FACILITIES

Solutions for educational workplaces

Eurovac systems have become an established solution for technical facilities in schools and institutions, where safety, cleanliness, and learning comfort are emphasized.

Efficient chip and dust removal improves air quality and reduces workplace risks.

Typical applications include:

- Textile and woodworking classrooms
- Soldering stations and electronics labs
- Multipurpose spaces and mechanical engineering classrooms

Available solutions include:

- Central vacuum and local extraction systems
- Outdoor chip and dust removal units (equipment rooms and containers)
- Air circulation filters and HEPA filtration
- Blowers also for wet cutting stations
- Spray booths and walls

HOW IS A EUROVAC SYSTEM IMPLEMENTED?

Step-by-step project – practical execution

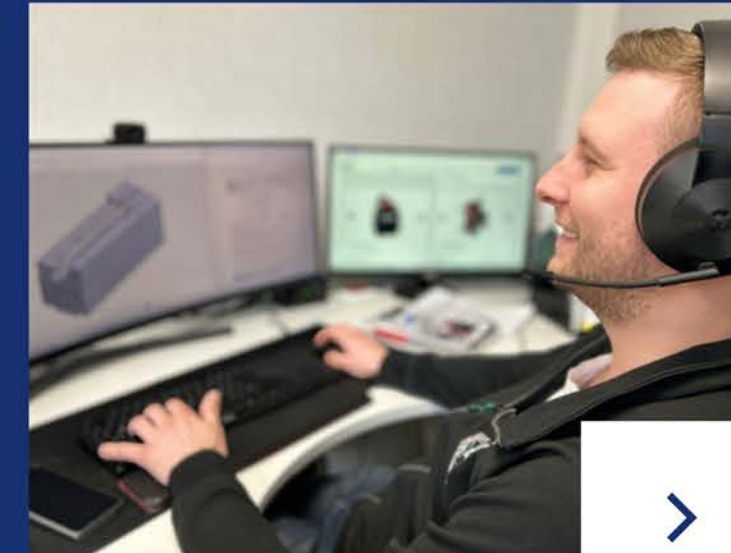

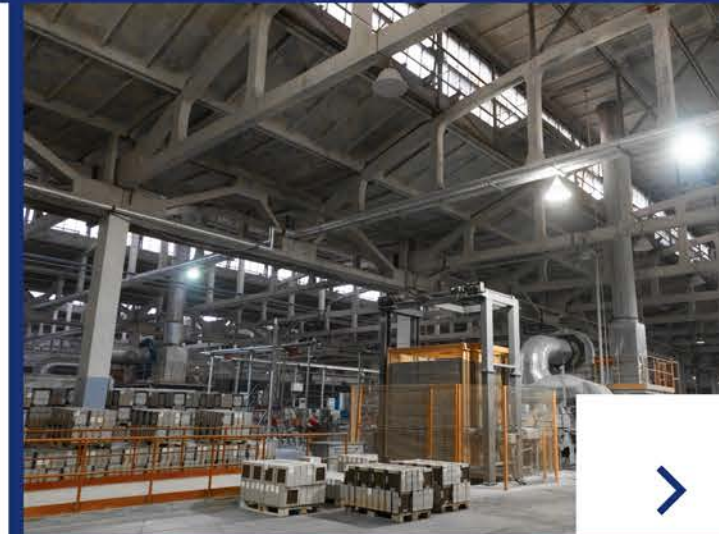

Expert planning from start to finish – turnkey delivery

Every Eurovac system is designed and implemented according to the customer's environment, requirements, and goals.

The delivery covers everything from design to commissioning – safely and efficiently.

Project phases:

1. **Needs assessment** – We review site conditions, usage needs, and objectives.
2. **System design** – We create a solution that meets all requirements: efficiency, safety, and regulations (e.g. ATEX).
3. **Manufacturing** – Equipment is manufactured mainly in Finland, using high-quality and durable materials.
4. **Delivery and installation** – The system is delivered and installed as a turnkey solution according to the agreed schedule and site conditions.
5. **Commissioning and training** – We ensure system functionality and train personnel in operation and maintenance.
6. **Service and support** – We provide comprehensive maintenance and spare part services throughout the system's lifecycle.

Deliveries to over 20 countries

Partners from various industrial sectors

SOLUTIONS FROM FINLAND TO THE WORLD

We manufacture our systems in Finland – but our customers are located all around the globe.

Eurovac systems have been delivered to several industries in the Nordic countries, across Europe, and widely around the world.

International customers particularly value the quality of Finnish workmanship, the durability of our systems, and our professional support.

Our partner network and flexible delivery model enable reliable deliveries also to demanding industrial environments abroad.

Reliable partner

WHY CHOOSE US?

OUR CUSTOMERS CHOOSE EUROVAC SYSTEMS BECAUSE THEY COMBINE FINNISH QUALITY, CUSTOMIZED DESIGN, COST EFFICIENCY, AND RELIABLE COOPERATION.

FINNISH MANUFACTURING

High-quality domestic workmanship for the demanding needs of industry.

TAILORED SERVICE

Each solution is designed to fit the customer's site and usage.

COST EFFICIENCY

Effective solutions without compromising safety or quality.

RELIABILITY

Long-term customer relationships – a supplier known for dependability and continuous support.

COMPREHENSIVE SOLUTIONS FOR INDUSTRIAL CLEANING – ALL FROM ONE SOURCE

Our services

- Customer needs assessment and equipment design
- System dimensioning, installation, and commissioning
- Electrical work, control panels, and PLC programming
- Spare parts and maintenance services

Product range

- Central cleaning systems for industry
- Dust and sawdust extraction systems
- Material transfer systems
- Welding gas and oil mist removal
- Industrial vacuum cleaners
 - Dry / wet vacuum models
 - Ash and special vacuums
 - ATEX-approved units for demanding environments
 - Solutions for heavy-duty use
 - Rental industrial vacuum cleaners
- Piping accessories, blowers, and air circulation filters
- Spray booths and spray walls

Accessories, supplies, and spare parts

- We offer a wide selection of nozzles, suction hoses, and filters – also compatible with other industrial vacuum brands
